

FAWKNER BODY REPAIRS
1259 SYDNEY ROAD
FAWKNER, VICTORIA 3060
PH:03 9359 9417

Fawkner Body Repairs has been operating in the Australian Automotive Market for thirty one years. My focus market is insurance crash repairer for IAG, Suncorp, Lumley's and manufacturer repairer for Lexus and Subaru.

In such an industry it requires that you remain up to date with technologies and products that will allow you to be a step ahead of your competitors and enable you to deliver a quality end product to the market.

My shop is very conscious of the environment, and we have installed related products to help reduce our overall impact on the environment such as cardboard recycling, water recycling and can recycling products.

We have installed the Exhaust Air Recycling System (EARS) in July 2006 and have found it to deliver many benefits to our business, with improvements to work health and safety, and reductions in energy usage.

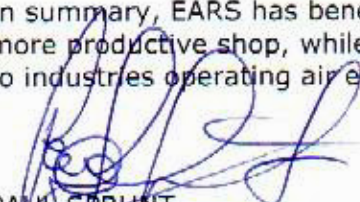

EARS has changed the overall environment considerably by reducing our air tool noise level, and also the amount of airborne contaminants in the shop. By reducing the air tool noise it has created an environment that is comfortable to work in and safer to operate.

This in turn creates an environment that my employees can operate more efficiently and safely, and also makes my business attractive to a more professional employee.

I am also benefiting from a reduction in my overall running costs. Since installing EARS, I have been operating a 15kw compressor which in the past I have operated a 22kw compressor.

My shop was recently awarded the IAG Preferred Smash Repairer Award for Innovation and Sustainability 2006 for our implementation of environmentally beneficial products.

In summary, EARS has benefited my business in providing a quieter, safer and more productive shop, while reducing my running cost and would recommend it to industries operating air equipment.
