7th September, 2007

Dear Bruce,

To Whom It May Concern:

We installed the EARS system to reduce our noise pollution inside our factory. It has shown us how much noise pollution was being created by our air drills and compressors. Our compressors are much quieter and not turning off and on all of the time, which would be savings us money in electricity. The drills with the two air lines coming into the base make them a bit heavier but the benefits of them being so quiet outweighs the inconvenience and has helped us find other areas in our factory that we needed to reduce noise.

I am happy to recommend it to anyone.

Yours faithfully

AV Guerin
Manager
